ENGINEERING DEPARTMENT

They are a corps of men who seldom see the light of day unless they are off duty. And when they are off duty they generally are working anyhow... on machinery which hasn't seen a shipyard in four years, a long time for a ship which is more than twenty years old.

They live on a steady diet of NSFO, lube oil, and feed water and the term "greasy snipe" in no figment of the imagination. Without their teamwork the ship would not live, for the engineers are responsible for the power source, a head of steam, and a dynamo.

Specifically the engineers are divided into B, M, and R Divisions. B Division operates and maintains the boilers and boiler spaces providing up to 600 pounds of steam for main propulsion and the many auxiliary uses. M Division maintains the main steam turbines, evaporators and associated equipment. R Division takes care of interior communications, the gyro compass, plumbing, heat, air conditioning, lighting, machinery repair and damage control.

LTJG A. G. MARSH
San Francisco, Cal.
Engineering Officer

LTJG P. M. ALTHOUSE
Southgate, Mich.
Damage Control Assistant

ENS J. H. NICHOLSON, JR.

Electronics Material Officer

ENS R. D. WOLFE
Philadelphia, Pa.
Assistant Navigator
Assistant Comm. Officer

Flag hoist, semaphore, flashing light, voice radio, coded word, radio teletype and even the megaphone are the foundations of the Operations Department. They are means of communicating, keeping in touch with the outside world beyond the horizon. Radar and electronics countermeasures equipment are some more highly refined innovations which also aid in our aim, and that is to stay informed...to see the enemy before he sees us.

In "Ops", OC Division handles the communications end, the men in radio and on the signal bridge working together to channel information to command posts on the bridge and in combat. OI Division operates out of the combat information center, where surface and air search radars are utilized to track friendly and potentially hositle skunks and bogies.

The Quartermasters, second only to the boatswainmates as the oldest rate in the Navy are also Operations types. Navigating, weatherwatching and logkeeping is their job.

Yeomen, personnelmen, and hospital corpsmen are also included here along with our most appreciated rate in the Mediterranean, the postal clerk.

SUPPLY DEPARTMENT

"Eat, drink, and be merry, for tomorrow...the replacement part you ordered six months ago probably won't be here," is often said to be the fight song of the Supply Department. This unearned, igominious reputation of Supply reflects the average GEARING sailor's need for a whipping boy, something upon which to unload all his pent up hostility.

Fact is, we are fed, paid, given laundry, barber, ship's store services and supplied wih thousands of replacement parts and consumable items over each fiscal year by an organization unrivaled in efficient management of the process of distribution.

While in the Mediterranean, lights were on in the Supply Office nearly 24 hours a day, not only keeping the ship combat ready, but also providing the ship's company with the opportunity to buy foreign merchandise at extremely low prices (say, does anybody want to buy a camel saddle? I have a couple of extras, see, and...)
